

Delivering the infrastructure that people rely on every day—to realize the energy transition and power a carbon-free planet

We strive to engineer solutions that have a positive impact on our planet and its inhabitants. To achieve this goal, we conducted a materiality assessment, as directed by our Board, who oversee our Environment, Social and Governance (ESG) program.

Through our ESG model, we have identified the key areas where we can make the greatest impact, and we remain committed to working towards a better and sustainable future for all.

Education on Sustainability

Integrity

Digital

HSE

Greenhouse gas emissions and energy usage

As we help our clients to decarbonize, we are setting net zero targets ahead of those set in the context of the Paris Agreement.

Employee engagement

We are fostering engagement, involvement, alignment and loyalty amongst our workforce.

Everyone belongs

We are fostering a culture where everyone feels they truly belong and are valued for their unique contributions.

Managing ESG impacts on projects

We focus on reducing embodied and operational carbon in our projects while minimizing water, energy, and raw material use. Our goal is to prevent environmental contamination and create social value, protecting human rights and enhancing biodiversity for the benefit of both people and the planet.

Business mix that addresses climate change

We advance progress through renewable energy, efficient grids, and electrified transportation. By utilizing energy storage and smart technologies, we are creating a resilient, low-carbon future.
